About Aeroflex / Metelics

The Experience and Resources to Deliver the Technological Edge

In many electronics applications, there is simply no margin for error. Second best can be fatal. That is why manufacturers look to Metelics for advanced microwave diodes, because in the critical areas of electronic countermeasures, communications and radar, we provide the technological edge.

Metelics' advanced capabilities are the result of integrating technological expertise with other resources to produce the most advanced microwave diodes available.

Today, Metelics is in the forefront of technology. Under the direction of our research staff, we have developed a very unique process technology which has made it possible for Metelics to achieve large production of highest FCO Schottkys and SRDs which have the lowest transition times available today.

Metelics has a team of scientists, device physicists and process engineers working together to optimize device performance in the characterization of existing products as well as in the development of next generation diodes.

Metelics has the technical and manufacturing resources necessary to deliver to the most demanding prime contractors. We maintain painstaking quality control at each stage of fabrication, assembly and test and delivery to meet stringent MIL-SPEC requirements. Metelics' technical, production and program management personnel work with customers in meeting delivery schedules on time, both for standard and customer-specified products.

Our most important priority is the customer. An on-line integrated information system tracks projects and orders through engineering, production and quality control. This closed-loop system provides customers with essential information on current project schedules and status. Equally important, customers work closely with key company personnel to ensure that all diodes are designed and manufactured to comply with their performance and quality standards.

Silicon Schottky Diodes

Schottky Diodes for Detector Applications

These diodes are fabricated on P-Type substrates for low 1/f noise and are optimized for either zero-bias (MSS20,XXX series) or biased (MSS39,XXX) operation. Zero-biased devices are processed to yield two distinct video impedance classes, one 1,500 Ohms typical and the other 4,000 Ohms typical. Applications requiring maximum stability and sensitivity will favor the higher video impedance. Biased detector operation offers the designer improved temperature stability and video impedance flexibility via bias current selection.

Zero Bias, $V_{BR} = 0.8 \text{ V min.}$

Silicon Schottky Diodes

Schottky Diodes for Mixer Applications

Industry leading, state-of-the-art performance in five barrier heights and ten configurations featuring Aeroflex / Metelics dual passivation and tri-metalization for ultra-reliability. Designs supporting doubler, limiter, mixer and sampler applications up to 40+ GHz. Chip, beam lead and packaged diodes for commercial, aerospace and defense environments. Parametric selection / matching as well as screening per MIL-PRF-19500 and MIL-PRF-38534 is available.

Low Barrier, $V_F = 230 \sim 350 \text{ mV}$, $V_{BR} = 2 \text{ V min.}$

SOT143

GaAs Schottky Diodes

Millimeter wave performance in twelve configurations featuring double passivation and Aeroflex / Metelics' tri-metallization for ultra-reliable operation in the most demanding environments. Topologies supporting limiter, mixer, multiplier and sampler designs operating to 60+ GHz are available in flip chip, beam lead and packaged form. Screening per MIL-PRF-19500 and MIL-PRF-38534 is available.

GaAs Hyperabrupt Varactor Diodes

The MGV series of hyperabrupt varactor diodes feature passivated mesa construction for low leakage and excellent post tuning drift. Available in three constant gamma families of 0.75, 1.0 and 1.25. These diodes will find application in tunable filters and oscillators up to 40 GHz. Optimum performance is obtained using die however packaged devices are available as well diodes screened per MIL-PRF-19500 and MIL-PRF-38534. Contact your representative for these and other options.

Silicon PIN Diodes

PIN Limiter Diodes

The MPN76XX series of PIN limiter diodes feature fully passivated, mesa construction with gold doping for low insertion loss and improved recovery. Available in seven I-layer and six mesa diameters for limiting thresholds from +7 dB to +23 dBm CW (P_{1dB}) and power handling up to +70 dBm pulsed ($1\mu s / 0.1\%$ DC). Available with screening per MIL-PRF-19500 and MIL-PRF-38534.

Silicon PIN Diodes

MicroStrip PIN Diodes

Aeroflex / Metelics MicroStrip PIN diode is designed as a 50 microstrip line when bias is at zero or at a negative bias. When forward biased the device is a reflective attenuator. Maximum isolation is achieved at 40mA forward bias.

Chip

Model	Configuration	I_R MAX nA	V_{BR} MIN V	Insertion Loss MAX	Return Loss TYP	Isolation MIN	Package

Silicon NIP Diodes

The MNP00XX series of NIP diodes are offered in four different I-layers and feature fully passivated, mesa construction for low leakage and reliability. Screening per MIL-PRF-19500 and MIL-PRF-3534 are available.

Planar Back (Tunnel) Diodes

The MBD series of tunnel (back) diodes are fabricated on germanium substrates with passivated, planar construction and all gold metallization for reliable operation up to +115 °C. Unlike the standard tunnel diode I_p is minimized for detector operation and binned in five values offering varying degrees of sensitivity and video impedance. The back detector is generally operated with zero bias and is known for its excellent temperature stability and fast video rise times.

MIS / MOS Capacitors

Aeroflex / Metelics MIS capacitors utilize a silicon nitride dielectric over a thermally grown silicon dioxide base. The resultant composite dielectric exhibits low leakage current and insertion loss with excellent long-term stability. The temperature coefficient of capacitance is typically +55 ppm / °C.

Sampling Phase Detector

The MSPD Series Integrates an SRD reference frequency multiplier, coupling capacitors and a Schottky diode microwave sampler / phase detector in a 0.075" by 0.100" hybrid. They are used to phase lock microwave oscillators up to 20 GHz to a much lower frequency reference by deriving a locking voltage from the sampled RF and the multiplied reference.

AEROFLEX
A passion for performance.

Our passion for performance is defined by three attributes represented by these three icons: solution-minded, performance-driven and customer-focused.
